

MOEN BIOSPHERE RESERVE NOMINATION FORM

[2016]

ANNEX AND APPENDICES

CONTENTS

Annexes

Annex I: MABnet Directory of the Biosphere Reserves

Annex II: Promotion and Communication Materials

Appendices – Moen Biosphere Reserve

1. List of species
2. List of habitats
3. Geological designations
4. Biotope protected areas
5. Protected Areas
6. Management Plans and Natura 2000 Sites
7. Endorsement letters of support from Biosphere Partners
8. List of main bibliographic references
9. Map of the area

Annex I to the Biosphere Reserve Nomination Form, September 2016 MABnet Directory of Biosphere Reserves -

Administrative details

Country: Denmark

Name of BR: Moen Biosphere Reserve

Year designated: (to be completed by MAB Secretariat)

Administrative authorities: Vordingborg Kommune

Name Contact: Annette Tenberg

Contact address: Moen Biosphere Project Secretariat, Storegade 2, DK 4780 Stege,

Phone: + 45 40 15 89 44

Related links: <http://www.vordingborg.dk/biosfaere-moen>

Social networks: Facebook: biosfære Møn and #biosfærerøen #biospheremoen

Description

General description:

The biosphere candidate area consists of a series of islands and islets in a shallow sea. With a total of 185 km of coastline in the biosphere reserve, it is clear that the coast plays an important role as an integral part of the area where land and sea meet. The terrestrial part occupies one half of the total area and can be characterised as consisting of two overriding topographic units created during the late Weichselian Ice Age. A north-south moraine ridge, Høje Møn (High Moen), extends as a 4-5 km wide belt with individual hills glacio-tectonic up-thrusted sheets of chalk that rise to over 100 m above sea level and with the iconic white chalk cliff facing towards the Baltic Sea in east.

The western terrestrial part is characterized by a moraine landscape typical of the eastern part of Denmark with a series of small landscape features also formed by the action of glaciers. Elongate terminal moraines, that do not approach the same height as towards east, give way to the west to a landscape with many small, gentle hills.

Since the last ice released its grip on the area, post-glacial processes have modelled the landscape in the candidate area – and continue to do so. Elevated sea floor and beach ridges comprise characteristic landscape features. A combination of the isostatic rise of the land in post-glacial times and the marine erosion and transport of sediments from the coast further east has constructed the landscape around Ulvhale and Nyord.

The sea surrounding the biosphere area varies from brackish water in the western part to the more saline water in the east. The marine part of the biosphere candidate area includes nature types as coastal lagoon and stone reef as well as a series of features like mudflats and sand flats that are exposed at low tide. The biosphere candidate is part of the Municipality Vordingborg with approximately 45.000 residents. About 10.000 residents live in the area of the proposed biosphere reserve. The population is broadly composed by Danes, immigrants from EU countries and a small group of people from non-western countries. The language spoken is danish with local dialects.

Major ecosystem type: Deciduous forest, grassland, shallow water marine brackish and saline ecosystems.

Major habitats & land cover types:

1. Forest, woodland and scrub (on chalk and on beach ridges)
2. Grassland (marsh, heath and meadows)
3. Agricultural land
4. Built-up area
5. Freshwater wetlands
6. Coastal area
7. Marine area (brackish and salt water)

Bioclimatic zone Dry Sub-humid

Location (latitude & longitude): (6.1)

Cardinal point, The main city Stege - 54°58'41" N, 12°16'53" E

Northernmost point: Bøgestrøm, northwest of the islet Små Ægholme - 55°06'50" N, 12°11'34" E

Southernmost point: Grønsund south of Møn - 54°52'20" N, 12°10'45" E

Westernmost point: Storstrømmen west of Farø - 54°57'02" N, 11°58'52" E

Easternmost point: The Baltic Sea (off Møns Klint) - 54°58'07" N, 12°34'59" E

The proposed biosphere reserve:

Core Area: terrestrial 2,767 ha, marine 3,397 ha, total: 6,165 (13,6%)

Buffer Zone: terrestrial 2,314 ha, marine 13,100 ha, total 15,414 (34,2%)

Transition Area: terrestrial 18,832 ha, marine 4,608 ha, total 23,339 (52,2%)

TOTAL: 45,118 ha

Main objectives of the biosphere reserve

Overall aim: "Living and working in harmony with nature". This goal expresses the desire to become a proces example of how small Danish islands will ensure sustainable future with lively communities in a unique and diverse nature. One of the specific goals is to stop depopulation and to prevent a fate as either "museum islands" or "luxury resort" for only a few. This can only succeed if we act today by developing the communities in a sustainable direction and cherish the islands' greatest potential, the amazing nature, by

1. Nature conservation
2. Sustainable socio- economic Development
3. Knowledge, Learning and Awareness

There will be implemented development projects in all three biosphere zones with the aim.

Monitoring

A variety of existing research activity, relevant to the management of the proposed Biosphere, is taking place. The research and monitoring is mostly based on projects regarding species and habitats on land and in the water and in focuses rural development and tourism.

The Biosphere Partnership plans to identify the specific research questions and the needs to effectively understand and carry out key management activities in all three areas, to be supported through applied student research projects. The research partners will among others be recruited from DTU Aqua (National Institute of Aquatic Resources), RUC (Roskilde University) and the Museum Southeast Denmark.

Research

Various monitoring activities are carried out by a range of local public and voluntary organisations, contributing to knowledge of the present situation, set out in the application and accompanying management strategy proces. A future research plan will focus on a specific species and habitat data base. Questions of research will be identified to determine monitoring activities needed to enable evaluation of impacts over time.

Specific variables

Abiotic		Biodiversity	
Abiotic factors		Afforestation/Reforestation	
Acidic deposition/Atmospheric factors		Algae	X
Air quality		Alien and/or invasive species	
Air temperature		Amphibians	
Climate, climatology	X	Arid and semi-arid systems	
Contaminants		Autoecology	
Drought		Beach/soft bottom systems	
Erosion		Benthos	
Geology	X	Biodiversity aspects	X
Geomorphology	X	Biogeography	
Geophysics	X	Biology	
Glaciology	X	Biotechnology	
Global change	X	Birds	X
Groundwater	X	Boreal forest systems	
Habitat issues	X	Breeding	
Heavy metals		Coastal/marine systems	X
Hydrology		Community studies	
Indicators		Conservation	X
Meteorology		Coral reefs	
Modeling	X	Degraded areas	X
Monitoring/methodologies	X	Desertification	
Nutrients		Dune systems	
Physical oceanography		Ecology	X
Pollution, pollutants	X	Ecosystem assessment	
Siltation/sedimentation		Ecosystem functioning/structure	
Soil	X	Ecosystem services	X
Speleology		Ecotones	
Topography		Endemic species	
Toxicology		Ethology	
UV radiation		Evapotranspiration

Cultural aspects	X	Impact and risk studies	X
Demography		Indicators	
Economic studies	X	Indicators of environmental quality	X
Economically important species	X	Infrastructure development	
Energy production systems	X	Institutional and legal aspects	
Ethnology/traditional practices/knowledge		Integrated studies	
Firewood cutting		Interdisciplinary studies	
Fishery	X	Land tenure	
Forestry	X	Land use/Land cover	X
Human health	X	Landscape inventorying/monitoring	
Human migration		Management issues	X
Hunting		Mapping	X
Indicators		Modelling	X
Indicators of sustainability		Monitoring/methodologies	X
Indigenous people's issues		Planning and zoning measures	
Industry		Policy issues	X
Livelihood measures		Remote sensing	
Livestock and related impacts		Rural systems	
Local participation	X	Sustainable development/use	X
Micro-credits		Transboundary issues/measures	
Mining		Urban systems	
Modelling		Watershed studies/monitoring	
Monitoring/methodologies		Social jobs for disadvantaged people	X
Natural hazards		Accessibility	X
Non-timber forest products			
Pastoralism			
People-Nature relations	X		
Poverty			
Quality economies/marketing	X		
Recreation	X		
Resource use			
Role of women			
Sacred sites			
Small business initiatives	X		
Social/Socio-economic aspects	X		
Stakeholders' interests	X		
Tourism	X		
Transports			

Annex II to the Biosphere Reserve Nomination Form, September 2016

Promotion and Communication Materials for the Proposed Biosphere Reserve

The proposed Moen Biosphere Reserve will provide a film and a series of photographies in professional quality for the Secretariats press events or web use. Find the material enclosed the application on USB stick and below the agreements on Non-Exclusive Rights.

Mailing address: 7 Place Fontenoy, 75352 Paris 07 SP, Direct Telephone: 00331 – 45681687 Direct Fax: 00331 – 45685655; e-mail: photobank@unesco.org; m.ravassard@unesco.org

AGREEMENT GRANTING NON-EXCLUSIVE RIGHTS

Reference:

1. a) I the undersigned, copyright-holder of the above mentioned video(s) hereby grant to UNESCO free of charge the non-exclusive right to exploit, publish, reproduce, diffuse, communicate to the public in any form and on any support, including digital, all or part of the video(s) and to licence these rights to third parties on the basis of the rights herein vested in UNESCO

b) These rights are granted to UNESCO for the legal term of copyright throughout the world.

c) The name of the author/copyright holder will be cited alongside UNESCO's whenever his/her work is used in any form.

2. I certify that:

a) I am the sole copyright holder of the video(s) and am the owner of the rights granted by virtue of this agreement and other rights conferred to me by national legislation and pertinent international conventions on copyright and that I have full rights to enter into this agreement.

b) The video(s) is/are in no way whatever a violation or an infringement of any existing copyright or licence, and contain(s) nothing obscene, libellous or defamatory.

Appendices

Appendix 1. List of Species

Key to Lists

Relevant Red Lists Categories (International IUCN) and National:	
EX (extinct)	
EW (extinct in the wild)	
RE (regionally extinct)	
CR (critically endangered)	A taxon is Critically Endangered when the best available evidence indicates that it meets any of the criteria A to E for Critically Endangered, and it is therefore considered to be facing an extremely high risk of extinction in the wild.
EN (endangered)	A taxon is Endangered when the best available evidence indicates that it meets any of the criteria A to E for Endangered, and it is therefore considered to be facing a very high risk of extinction in the wild.
VU (vulnerable)	A taxon is Vulnerable when the best available evidence indicates that it meets any of the criteria A to E for Vulnerable, and it is therefore considered to be facing a high risk of extinction in the wild.
NT (near threatened)	A taxon is Near Threatened when it has been evaluated against the criteria but does not qualify for Critically Endangered, Endangered or Vulnerable now, but is close to qualifying for or is likely to qualify for a threatened category in the near future.
LC (least concern)	

: Corresponds to threatened species

IUCN Red List*: Categories from September 2016

E¹⁾ Category not yet updated. Corresponds in this paper to the new category EN

The Habitats Directive:

Hab.Dir A2	Species which are endangered, the conservation of which the Community has a particular responsibility in view of the proportion of their natural range which falls within the territory of the Community. They require the designation of special areas of conservation.
Hab.Dir A4	Animal and plant species of Community interest (i.e. endangered, vulnerable, rare or endemic in the European Community) in need of strict protection. They are protected from killing, disturbance or the destruction of them or their habitat.
Hab.Dir A5	Animal and plant species of Community interest whose taking in the wild and exploitation may be subject to management measures.

The Birds Directive:

✓	Includes protected species naturally occurring in the European Union OR species and sub-species which are particularly threatened where Member States must designate Special Protection Areas (SPAs) for their survival and all migratory bird species.
---	---

Yellow List:

Yellow listed species is a national inventory of plant and animal species that are declining in Denmark, but still are so frequent that they are not included on the National Red List. The list also includes species that Denmark in an international context has a special responsibility, irrespective of whether the species are included on the Red List or not.

X Demanding attention	Relatively common species, but with such limited stocks that they are likely to be vulnerable in the near future if the negative factors currently affecting them continue being allowed to work, as well as common species with a strongly negative population trends in Denmark.
A National responsibility species ATAY	Species for which Denmark at some time in the species' life cycle includes a large part of the Earth's total population that we have a special national responsibility for species protection. This category can be divided into two subcategories: breeding species (AY) and migratory species (AT). This classification is based on the fact that Denmark has a large number of important resting places for several migratory bird species, and that Denmark has a particular responsibility for these birds during migration.

IUCN Red Listed Species

Species in the proposed biosphere reserve that are globally red listed according to IUCN Red List of threatened species.

Taxon Group	International Name	Danish Name	IUCN Red List*
Fish	<i>Anguilla anguilla</i>	Ål	CR
Fish	<i>Gadus morhua</i>	Torsk	VU
Plants	<i>Liparis loeselii</i>	Mygblostm**	(VU)

Economically important species

Type	International Name	English Name	Danish Name
Agriculture, crops	<i>Beta vulgaris</i>	Beet	Sukkerroe
Agriculture, crops	<i>Brassica rapa</i> , ssp. <i>oleifera</i>	Mustard	Sennep
Agriculture, crops	<i>Brassica napus</i> ssp. <i>napus</i>	Rapeseed	Rapsfrø
Agriculture, crops	<i>Hordeum vulgare</i>	Barley	Byg
Agriculture, crops	<i>Secale cereale</i>	Rye	Rug
Agriculture, crops	<i>Triticum aestivum</i>	Wheat	Hvede
Agriculture, crops	<i>Fragaria x ananassa</i>	Strawberry	Jordbær
Agriculture, crops	<i>Avena sativa</i>	Oat	Havre
Agriculture, crops	<i>Malus domestica</i>	Apple	Æbler
Agriculture, livestock	<i>Apis mellifera</i>	European honey bee	Europæisk honningbi
Agriculture, livestock	<i>Bos taurus</i>	Cattle	Kvæg
Agriculture, livestock	<i>Ovis aries</i>	Sheep	Får
Agriculture, livestock	<i>Apra aegagrus hircus</i>	Goat	Geder
Agriculture, livestock	<i>Equus caballus</i>	Horse	Hest
Agriculture, livestock	<i>Sus scrofa</i>	Pig	Svin
Fishing	<i>Clupea harengus</i>	Herring	Sild
Fishing	<i>Esox lucius</i>	Northern pike	Gedde
Fishing	<i>Perca fl uviatilis</i>	European perch	Aborre
Fishing	<i>Platichthys flesus</i>	European Flounder	Skrubbe
Fishing	<i>Salmo salar</i>	Atlantic salmon	Atlanterhavslaks
Fishing	<i>Sprattus sprattus</i>	European sprat	Brisling
Fishing	<i>Gadus morhua</i>	Atlantic cod	Torsk
Fishing	<i>Anguilla anguilla</i>	Eel	Ål
Fishing	<i>Salmo trutta</i>	Trout	Ørred
"Fishing"	<i>Zostera marina</i>	Eelgrass	Ålegræs (potential as important special crops)
Forestry	<i>Abies nordmanniana</i> / <i>Picea abies</i>	Nordmann fir /Norwegian spruce	Nordmannsgran/ Rødgran
Forestry	<i>Fagus sylvatica</i>	Beech	Bøg
Forestry	<i>Pinus sylvestris</i>	Pine	Fyrretræ
Forestry	<i>Quercus robur</i>	Pedunculate oak	Eg
Hunting	<i>Anser anser</i>	Greylag goose	Grågås
Hunting	<i>Capreolus capreolus</i>	Roe deer	Rådyr
Hunting	<i>Anas platyrhynchos</i>	Mallard	Gråand

Appendix 2

List of Habitat Nature Types

Below are listed the habitats types which forms the basis for the current designation for habitat areas in the biosphere area. The first table provides the habitats that are prioritized in the EU.

EU Priority Habitat Types		
Danish Name	Name in English	EU kode
Avneknippemose	Calcareous fens with <i>Cladium mariscus</i> and species of the <i>Caricion davallianae</i>	(7210)
Elle- og askeskov	Alluvial forests with <i>Alnus glutinosa</i> and <i>Fraxinus excelsior</i> (<i>Alno-Padion</i> , <i>Alnion incanae</i> , <i>Salicion albae</i>)	(91E0)
Enebærklit	Coastal dunes with <i>Juniperus</i> spp	(2250)
Kalkoverdrev	Semi-natural dry grasslands and scrubland facies on calcareous substrates (<i>Festuco-Brometalia</i>) (*important orchid sites)	(6210)
Kildevæld	Petrifying springs with tufa formation (<i>Cratoneurion</i>)	(7220)
Klithede	Decalcified fixed dunes with <i>Empetrum nigrum</i>	(2140)
Lagune	Coastal lagoons	(1150)
Surt overdrev	Species-rich <i>Nardus</i> grasslands, on siliceous substrates in mountain areas (and submountain areas, in Continental Europe)	(6230)
Tørt kalksandsoverdrev	Xeric sand calcareous grasslands	(6120)

Other EU Habitat Types		
Danish Name	Name in English	EU kode
Brunvandet sø	Natural dystrophic lakes and ponds	(3160)
Bugt	Bay	(1160)
Bøg på kalk	Medio-European limestone beech forests of the <i>Cephalanthero-Fagion</i>	(9150)
Bøg på moor	<i>Luzulo-Fagetum</i> beech forests	(9110)
Bøg på muld	<i>Asperulo-Fagetum</i> beech forests	(9130)
Ege-blandskov	Subatlantic and medie-European oak and oak-hornbeam forests of the <i>Carpinion betuli</i>	(9160)
Enekrat	<i>Juniperus communis</i> formations on heaths or calcareous grasslands	(5130)

Enårig strandengsvegetation	Salicornia and other annuals colonising mud and sand	(1310)
Forklit	Embryonic shifting dunes	(2110)
Grå/grøn klit	*Fixed coastal dunes with herbaceous vegetation (grey dunes)	(2130)

Other EU habitat types

Danish Name	Name in English	EU kode
Havtornklit	Dunes with Hippophae rhamnoides	(2160)
Hvid klit	Shifting dunes along the shoreline with Ammophila arenaria (white dunes)	(2120)
Klitlavning	Humid dune slacks	(2190)
Kransnålalge-sø	Hard oligo-mesotrophic waters with benthic vegetation of Chara spp.	(3140)
Kystklint/klippe	Vegetated sea cliffs of the Atlantic and Baltic coasts	(1230)
Næringsrig sø	Natural eutrophic lakes with Magnopotamion or hydrocharition – type vegetation	(3150)
Rev	Reef	(1170)
Rigkær	Alkaline fen	(7230)
Sandbanke	Sandbanks which are slightly covered by seawater all the time	(1110)
Skovklit	Wooded dunes of the Atlantic, Continental and Boreal region	(2180)
Stilkege-krat	Old acidophilous oak woods with Quercus roburon sandy plains	(9190)
Strandeng	Atlantic salt meadows (Glauco-Puccinellietalia maritimae)	(1330)
Strandvold med enårlige planter	Annual vegetation of drift lines	(1210)
Strandvold med flerårige planter	Perennial vegetation of stony banks	(1220)
Søbred med småurter	Oligotrophic to mesotrophic standing waters with vegetation of the littorelletalia uniflorae and/or Isoetae-Nanojuncea	(3130)
Tidvis våd eng	Molinian meadows on calcareous, peaty or clayey-siltladen soils (Molinion caeruleae)	(6410)
Tør hede	European dry heath	(4030)

Urtebræmme	Hydrophilous tall herb fringe communities of plains and of the montane to alpine level	(6430)
Vadeflade	Mudflats and sandflats not covered by seawater at low tide	(1140)
Vinteregeskov	Galio-Carpinetum oak-hornbeam forests	(9170)
Våd hede	Northern Atlantic wet heaths with <i>Erica tetralix</i>	(4010)

Appendix 3

Geological Designations

The geological designation in the proposed biosphere reserve are:

Locality	NGI	NK	GS	Comments
The cliff at Møns Klint	NGI 175a	NK 26	GS 4-1	<p>Møns Klint is a roughly 6 km long cliff profile, where sheets of chalk have been thrust up and reach heights of more than 100 m. The chalk contains many fossils and traces of animals that lived on the sea floor and burrowed in the calcareous ooze. The chalk pinnacles alternate with lower areas where the layers consist of glacial deposits of clay, sand and gravel. The chalk sheets form marked ridges that can be followed in the landscape behind the cliffs. The thrust sheets in the cliffs at Møns Klint represent one of the largest and most impressive examples of glacial tectonics in the world. The cliffs here are one of Denmark's most important localities as regards landscape. The chalk in the cliff is of Late Cretaceous (Maastrichtian) age, and this is the only place in Denmark where rocks of this age are exposed. The Høje Møn area is of international geological importance because of the Cretaceous sequence exposed here and also because of the deformational glaciotectonic structures.</p> <p>The beach at the base of the cliffs consists almost entirely of flint.</p> <p>Møns Klint is a primary locality for Geosite theme 4: Glacially disturbed coastal cliffs.</p>
Klintholm	NGI 175b	NK 25		<p>The locality at Klintholm comprises 10-15 m of low coastal cliffs in eastern Møn that expose sheets of chalk and Quaternary deposits that have been deformed by glaciotectonics. The profile indicates, amongst other items, that glaciers advanced across this area from the east twice in Middle Weichselian times, probably at 55.000 and 35.000 years ago.</p> <p>Klintholm is a key locality for Weichselian stratigraphy in southeast Denmark and for the geological evolution of eastern Denmark through the last 140.000 years. Studies of the cliffs have given important information for our understanding of conditions during the ice-free intervals in the Weichselian. It is the type locality for the Klintholm till. The cliffs are important for educational and research purposes.</p>

Tøvelde	NGI 176b	NK 24	GS 10-2	<p>Late- and post-glacial lake deposits in the earlier Tøvelde lake that today forms two small depressions in the moraine landscape. The eastern depression, which has been drained, is cut by the low coastal cliff and consists of three smaller depressions, whilst the western part of the former lake is about 100 m from the coast.</p> <p>The Tøvelde locality is of international significance for research and understanding of climatic evolution during and after the end of the last ice age. The late- and post-glacial deposits represent a climatic archive and a paleontological data bank that reveals information about the climate and the development of plant and animal life when a melting glacier frees the naked landscape in front of an icecap. The type locality at Allerød is no longer accessible, so the deposits at Tøvelde have become even more important and can become a new international type locality for the Allerød interval.</p> <p>Tøvelde on Møn is a primary locality for Geosite theme 10: Climate archives.</p>
Hvideklint	NGI 176a	NK 24		<p>Hvideklint is the most northern part of a 3 km-long cliff profile on the southeast coast of Møn, stretching from Hjelm Nakke in the south to Ørbækklund in the north. Most of the cliff is about 10 m high, but in some places it reaches up to 25 m where the large chalk sheets function as resistant blocks.</p> <p>The oldest exposed chalk sedimentary rocks in eastern Denmark occur at Hvideklint. The profile is also instructive concerning the study of glaciectonic events and for providing information regarding the direction of flow of the ice in the southern part of Denmark.</p> <p>There is a series of up-thrust sheets of strongly disturbed chalk in the coastal profile. The chalk here is the oldest that is exposed at the surface in Denmark. The Quaternary succession includes deposits from the Saalian glacial period, the Eemian inter-glacial and the Weichselian. There are also lake deposits from the Bølling and Allerød intervals at the end of the Weichselian glaciation. These deposits, that have been pressed upwards along a northwest – southeast ice front, contain interesting deformational structures.</p>

Grønsund and Fanefjord	NK 23	<p>Grønsund sound represents a very dynamic and changing environment in which the form and location of deeps and sand bars constantly vary. Fanefjord is the opposite; it is a low energy environment where changes take place very slowly.</p> <p>The narrow sound of Grønsund is one of the connections between the Great Belt and the Baltic Sea. Conditions on the sea floor here are largely controlled by changes in sea level in the Baltic because of the pressure of the wind on the water. This has resulted in the formation of a submarine delta in a funnel-shaped area. The strong currents have formed a deep central channel while the surrounding surfaces form the underwater delta. The very dynamic and varying environment means that the form and location of the channel and sand bars are constantly changing.</p> <p>In contrast to this, the embayed form of the coast in Fanefjord reflects a low energy environment where there are tidal meadows and reed marshes that extend far out into the brackish water.</p>

The authorities and managers of the core and bufferzones:

LETTER OF ENDORSEMENT

Vordingborg Kommune er initiativtager og den lokale myndighed bag biosfæreprojektet på Møn.

Vordingborg Kommune har, i partnerskab med en bred gruppe af nationale, regionale og lokale aktører, arbejdet på at gøre - Møn med omkringliggende øer og hav - til det første danske UNESCO biosfære område siden Nordøst Grønland sluttede sig til UNESCO netværket i 1977.

"Vores vision er, at Møn og de omkringliggende øer bliver et internationalt kendt eksempel for skandinavisk kystnatur, med Møns Klint som bærende naturikon. Et ø-rike mellem storbyerne Hamborg, København og Malmø, hvor man kan komme tæt på naturens kræfter og en storslægt stjernehimmel. Det gør vi ved at bevare den "vilde" og den "stille" natur og tilbyde unikke og tilgængelige oplevelser for naturelskere året rundt. Vi vil promovere løsninger der forener bevarelse af arternes mangfoldig med deres bæredygtige brug. Lokalsamfundet, med alle aldersgrupper repræsenteret, skal drage nytte af det igennem uddannelse, lokale arbejdspladser og en fantastisk natur at leve i."

Biosfære-kandidat Møn har potentialet til at være et nationalt og internationalt modelområde for livet på de skandinaviske småøer, hvor menneskerne rykker tættere sammen om bevarelse og udvikling af en verdensklasse natur og nye former for bæredygtigt erhverv.

Vordingborg

Kommunale ressourcer understøtter allerede i dag mange af de lokale ildsjæle, som er organiseret i foreninger om naturens og kulturarvens bevarelse. Vi kender værdien af civilsamfundets bidrag til udviklingen, og i fællesskab vil vi arbejde på at sikre områdets unikke natur- og kulturværdier og det levende samfund for de kommende generationer.

Biosfære-kandidaten Møn er del af Vordingborg Kommune, og udviklingen af områdets grønne profil ligger i direkte forlængelse af kommunens Vision 2030 og potentielleplanen for Kystdestination Møns Klint.

Med venlig hilsen

Jan Michelsen
Udviklingsdirektør

ENDORSEMENTS

Signed by the authority in charge of the Ministry of Environment and Food in Denmark, Nature Agency

Naturstyrelsen er den nationale arealforvalter på en stor del af de områder, der er udpeget som kerneområder i Møn Biosfære-projektet. Naturstyrelsens vigtigste formål er at skabe størst mulig værdi for samfundet i form af gode rammer for friluftslivet, beskyttelse af naturen og effektiv drift af styrelsens skov- og naturarealer.

Det er formål, der falder godt i tråd med intentionerne i UNESCOs Man and Biosphere program og derfor kan Naturstyrelsen udtrykke sin støtte til projektet og ideerne bag. Vi hilser desuden velkommen, at projektet arbejder med, at det vil være Naturstyrelsens langsigtede drifts- og plejeplaner for kerne- og bufferområderne, der vil være grundlaget for en kommende managementplan.

Brugen af de kerneområder, som indgår i ansøgningen er underlagt den beskyttelse og lovgivning, der er gældende i Danmark, og Naturstyrelsen noterer sig at der ikke i forbindelse med UNESCOs Man and Biosphere programmet er krav om yderligere beskyttelse eller krav end de allerede eksisterende.

ENDORSEMENT

Signed by the authority Danish National Museum in charge of Liselund Park on Møn

Liselund park på Møn er uden sidestykke i Danmark. Det er et velbevaret romantisk haveanlæg med lystslot, småbygninger og havemonumenter og frem for alt vand i kanaler, sører, vandfald og kaskader samt åbning mod det åbne hav. Stærkt inspireret af Rousseaus naturfilosofi er Liselund en sjældent bevaret helhed – lige fra den store have til det lille møbel. I dag er Liselund park en del af Nationalmuseet i Danmark.

Nationalmuseet støtter Vordingborg Kommunes initiativ med at ansøge UNESCO om optagelse af Møn som biosfæreområde, idet Liselund park repræsenterer den bevaringsværdige mangfoldighed af både natur og kulturarv.

ENDORSEMENT

Signed by the authority in charge of the Fishing Zealand Cooperation

Fishing Zealand is committed to sustainable sport fishing.

Sustainable sport fishing is a concept that not only involves the way the individual fisherman conducts his or her own fishing. In this case it also involves Fishing Zealand's participation in a large number of environmental and tourism projects and in activities that promote sustainable sport fishing.

One very important aspect of Fishing Zealand's endeavors is to promote improvement of the present conditions in rivers, lakes and coastal areas so that the wild fish populations have a better chance for reproduction. The release of locally acclimated trout is also important, as well as addressing issues that keep fish from carrying out their natural life cycles.

Here are some of the ways Fishing Zealand works to make sport fishing sustainable:

- Improving fish habitats in rivers and streams, including adding rocks and gravel and eliminating barriers.
- Greater focus on the factors that limit the fish populations in saltwater.
- Greater focus on the environmental conditions in lakes and fjords.
- Continuation of the expert breeding and stocking efforts carried out by the Zealand Trout Association.
- Involvement of volunteers in environmental efforts.
- Production of informational material on good sport fishing conduct.
- Courses for sport fishermen.
- Establishing a network of certified guides.

We are doing everything we can to promote sustainable sport fishing, and we hope that you will do the same. You can read more about how we expect sport fishermen to conduct themselves here.

The Fishing Zealand cooperation is partner in the biosphere cooperation on Moen. We support in particular the preservation of water areas with all species and will support the biosphere idea in practical project cooperation, like e.g. the South Baltic project CATCH.

ENDORSEMENTS

Signed by the head of development, Innovation and Growth, Region Zealand, Denmark

Region Zealand is a political organisation and is one of five administrative regions in Denmark. Region Zealand consists of 17 Danish municipalities, one of which is Vordingborg Municipality.

Region Zealand's department of regional development bases its work on a strategy that aims to ensure growth and strengthen regional employment; this can be done e.g. through sustainably developing culture and nature in order to attract both citizens and tourists.

The Moen Biosphere project contributes to the objectives of the strategy by making Region Zealand an even more appealing place to stay, as well as promoting growth through the distinctive features of the region. Furthermore, the project aims to collaborate across the region with the other sites, such as UNESCO Global Geopark Odsherred and UNESCO world heritage site Stevns Klint, in order to convey knowledge across the geology of the region. Therefore, Region Zealand endorses Vordingborg Municipality and their application to become a part of the UNESCO programme 'Man and Biosphere'.

ENDORSEMENTS

Signed by the authority in charge of the Museum Sydøstdanmark

Museum Sydøstdanmark er et statsanerkendt kulturhistorisk museum hvis ansvarsområde bl.a. omfatter Møn.

Gennem de indbyrdes forbundne opgaver; indsamling, registrering, bevaring, forskning og formidling vil museet i et lokalt, nationalt og globalt perspektiv: aktualisere viden om kulturarv og gøre den tilgængelig og vedkommende; udvikle anvendelse og betydning af kulturarv for borgere og samfund; sikre kulturarv for fremtidens anvendelse og bidrage til styrkelse af identitet og udvikling lokalt, nationalt og international. Museet indgår derfor som en naturlig samarbejdspartner for biosfæreprojektet og indgår allerede i et samarbejde med projektet i forbindelse med den kulturelle vandrerute Camønoen.

ENDORSEMENTS

Signed by Jesper Pørksen, sekretariatsleder, Dansk Cykelturisme

Dansk Cykelturisme er en forening af private og offentlige medlemmer, der som sit primære formål har at udvikle cykelturismen i Danmark. Det gør vi ved at udvikle nye projekter, skabe sammenhæng i cykelturismeindsatser samt formidle viden og erfaringer om cykelturisme. Vi har et tæt samarbejde med mange aktører inden for cykelturisme, heriblandt Vejdirektoratet, Dansk Kyst og Naturturisme og VisitDenmark.

Vordingborg kommune er medlem af Dansk Cykelturisme. I fælleskab har vi arbejdet for at gøre kommunen mere cykelvenlig for både borgere og besøgende.

Derfor er det kun naturligt for Dansk Cykelturisme at understøtte kommunens bestræbelse på at få Møn udnævnt som biosfæreområde. Cyklen er nemlig et oplagt transportmiddel at bruge til opdagelse af hele biosfæreområdet. På Møn findes allerede veludviklede og velformidlede tematiske rundture ligesom øen også besøges af et par populære langtursruter. De "sejlende cykelstier" er også værd at nævne som et innovativt bud på, hvordan cykling kan kombineres med levende kulturhistorie.

Vi stiller hermed vores samarbejde til rådighed for det kommende biosfære-sekretariat i udviklingen af Møn som en stærk og bæredygtig cykeldestination.

KOMMUNE

VORDINGBORG
KOMMUNE

ENDORSEMENTS

Signed by the authority in charge of the association “Nyord Ø”

The island of Nyord has great nature and culture values and has every year more than 160.000 visitors. Regarding the application for biosphere status the island of Nyord is consisting of core areas and buffer areas.

Nyord Ø is an association of local people, who are working with the purpose of creating local jobs in order to attract new (and younger) inhabitants. We are working close together with Nyord Ø-Kød ApS, which cattle is grassing part of our 400 ha meadows to protect our rich birdlife. The most valuable ressources of the island is sea, nature and farmland, so first and foremost we are working to make it possible to take over 55 ha farmland, which at the moment is farmed conventionally and then farm it ecologically. We want to harvest special crops and start a local production of fine products (mustard, oil, flour, appleproducts etc.). In that way we hope to create jobs – also jobs with a social dimension for people who needs a protected job. We are sure that a biosphere status of Møen and Nyord will be helpful to make our project possible. We have been supporting the work to apply for biosphere status from the very beginning and we are represented in the present advisory board. In cooperation with the local municipality and the secretariat of the biosphere project we have applied at the Danish “Friluftsrådet” for support to employ the first “biosphere-ranger”, who shall create a concept of both local activities and PR and PR and activities within the biosphere project.

ENDORSEMENTS

Signed by the authority in charge of Nyord Ø-Kød ApS

Nyord Ø-Kød ApS is a company organised with a CEO and with 22 shareholders of which 21 are people with a permanent or holiday residence in the island Nyord – and a 22nd person who is a full time farmer. The purpose of the company is to raise cattle in an ecological fashion. Our animals (approx.. 40 of the breed ANGUS) graze the meadows of Nyord, which creates the best biotope for the many, many bird species resting and nesting on the meadows. Our animals only eat the grass on the meadows and wraps produced on the islands ecological fields. The meat is slaughtered and sold locally and demand is substantial. With a Biosfere status for Moen and surrounding areas Nyord Ø-Kød would see a strengthening of our ability to brand ourselves. Also, with an increased volume of animals we would be able to employ one or more people.

ENDORSEMENTS

Signed by the authority in charge of:
The citizen's local councils in the proposed Biosphere Reserve Møn

Ud ad Vordingborg Kommunes 16 lokalråde ligger 4 lokalråde i det kommende biosfæreområde: Bogø Lokalråd, Vestmøns Lokalråd, Stege og omegns Lokalråd og Østmøns Lokalråd.

Alle borgere i kommunen tilhører et lokalråd. Lokalrådene er nedsat som frivillige foreninger, der skal sikre, at der etableres et åbent og ligeværdigt samarbejdsforum mellem Vordingborg Kommune og engagerede borgere, organisationer, foreninger og erhvervsliv i de enkelte lokalområder.

Til hvert lokalområde/lokalråd er der knyttet et dialogudvalg af lokalpolitikere. Dialogudvalgene er nedsat på tværs af partier og politiske udvalg. I dagligdagen er der en tæt dialog mellem dialogudvalg, administration og lokalrådets bestyrelse. Én gang om året mødes lokalrådets bestyrelse med administrationen til et administrativt stormøde.

Endvidere afholder lokalrådet mindst én gang om året et åbent dialogmøde mellem borgerne i de enkelte lokalområder og deres tilknyttede dialogudvalg. Dialogen og samarbejdet mellem politikere, administration og lokalråd medvirker til et bredt og helhedsorienteret syn på de enkelte lokalrådernes styrke og udfordringer. De enkelte områders styrke og udfordringer findes ofte beskrevet i lokalrådenes lokale udviklingsplaner (LUPer), som er udarbejdet efter et koncept, som administrationen har udarbejdet i samarbejde med lokalrådene.

Lokalrådene i det kommende biosfære område på Møn støtter op omkring Vordingborg Kommunes ansøgning til UNESCO. Vi understøtter at biosfæreprojektet fokuserer på bevarelse af naturens mangfoldighed og vores rige kulturarv. I særdeleshed understøtter vi at borgerne vil have en vigtig rolle i det kommende biosfæreområde med fokus på uddannelse, arbejdspladser og en bæredygtig udvikling.

Østmøns Lokalråd: Et flertal støtter op om ansøgning, et mindretal er kraftigt imod

Endvidere afholder lokalrådet mindst én gang om året et åbent dialogmøde mellem borgerne i de enkelte lokalområder og deres tilknyttede dialogudvalg. Dialogen og samarbejdet mellem politikere, administration og lokalråd medvirker til et bredt og helhedsorienteret syn på de enkelte lokalråders styrke og udfordringer. De enkelte områders styrke og udfordringer findes ofte beskrevet i lokalrådenes lokale udviklingsplaner (LUPer), som er udarbejdet efter et koncept, som administrationen har udarbejdet i samarbejde med lokalrådene.

Lokalrådene i det kommende biosfære område på Møn støtter op omkring Vordingborg Kommunes ansøgning til UNESCO. Vi understøtter at biosfæreprojektet fokuserer på bevarelse af naturens mangfoldighed og vores rige kulturarv. I særdeleshed understøtter vi at borgerne vil have en vigtig rolle i det kommende biosfærområde med fokus på uddannelse, arbejdsplasser og en bæredygtig udvikling.

Vestmøn Lokalråd:

ENDORSEMENTS

**Signed by the authority in charge of:
The citizen's local councils in the proposed Biosphere Reserve Møn**

Ud ad Vordingborg Kommunes 16 lokalråde ligger 4 lokalråde i det kommende biosfæreområde: Bogø Lokalråd, Vestmøns Lokalråd, Stege og omegns Lokalråd og Østmøns Lokalråd.

Alle borgere i kommunen tilhører et lokalråd. Lokalrådene er nedsat som frivillige foreninger, der skal sikre, at der etableres et åbent og ligeværdigt samarbejdsforum mellem Vordingborg Kommune og engagerede borgere, organisationer, foreninger og erhvervsliv i de enkelte lokalområder.

Til hvert lokalområde/lokalråd er der knyttet et dialogudvalg af lokalpolitikere. Dialogudvalgene er nedsat på tværs af partier og politiske udvalg. I dagligdagen er der en tæt dialog mellem dialogudvalg, administration og lokalrådets bestyrelse. Én gang om året mødes lokalrådets bestyrelse med administrationen til et administrativt stormøde.

Endvidere afholder lokalrådet mindst én gang om året et åbent dialogmøde mellem borgerne i de enkelte lokalområder og deres tilknyttede dialogudvalg. Dialogen og samarbejdet mellem politikere, administration og lokalråd medvirker til et bredt og helhedsorienteret syn på de enkelte lokalområders styrke og udfordringer. De enkelte områders styrke og udfordringer findes ofte beskrevet i lokalrådenes lokale udviklingsplaner (LUPer), som er udarbejdet efter et koncept, som administrationen har udarbejdet i samarbejde med lokalrådene.

Lokalrådene i det kommende biosfære område på Møn støtter op omkring Vordingborg Kommunes ansøgning til UNESCO. Vi understøtter at biosfæreprojektet fokuserer på bevarelse af naturens mangfoldighed og vores rige kulturarv. I særdeleshed understøtter vi at borgerne vil have en vigtig rolle i det kommende biosfæreområde med fokus på uddannelse, arbejdspladser og en bæredygtig udvikling.
